MedOS — Marketing Team Guide

Everything you need to understand, demo, and sell MedOS to hospitals

1. What is MedOS? (Explain in 30 seconds)

One-liner:

"MedOS is an AI-powered system that runs the entire patient experience in a hospital — from WhatsApp booking to doctor consultation — so hospitals need fewer receptionists and patients wait less."

Simple explanation for anyone:

Think of it like this — right now, when you go to a hospital:

1. You wait in line at reception
2. Give your name, phone, problem
3. Get a paper token
4. Sit and wait with no idea when your turn is
5. Doctor asks the same questions again
6. Doctor writes prescription on paper
7. You go to billing, wait again

With MedOS:

1. You message the hospital on WhatsApp → "mujhe bukhar hai"
2. AI bot asks a few questions, finds the right doctor, books your slot
3. You walk in, tap your phone at the kiosk → checked in instantly
4. TV screen shows your position. Your phone tells you "You're #3, 10 min wait"
5. A voice calls your name in Hindi/English when it's your turn
6. Doctor already has your history on screen. Taps to prescribe medicines.
7. Bill auto-generated. Insurance auto-verified. Follow-up reminder sent.

Key message: MedOS replaces 80% of reception work with AI. Patients are happier. Hospitals make more money.

2. Who Do We Sell To?

Target	Size	Pain Point	Our Plan
Multi-specialty clinics	5–15 doctors	Overwhelmed reception, long waits, no digital presence	Professional ₹45K/mo
Small clinics	1–3 doctors	Want to look modern, attract younger patients	Starter ₹15K/mo
Hospital chains	15+ doctors, multiple branches	Standardization, central management	Enterprise ₹1.2L+/mo
UAE clinics	Any size	Insurance compliance (DHA), multilingual patients	Custom AED pricing

Best first targets: Mid-size multi-specialty clinics (5–15 doctors) in Tier 1/2 cities (Bangalore, Hyderabad, Pune, Mumbai, Goa). They have the budget, feel the pain, and decide fast.

3. How to Demo MedOS

Demo URL: <https://medos.haztech.cloud>

Login credentials:

- Super Admin: **superadmin@haztech.in** / password123
- Hospital Admin: **admin@haztech.in** / password123
- Doctor (Pediatrics): **priya@haztech.in** / password123
- Doctor (Cardiology): **amit@haztech.in** / password123

Demo script (15 minutes):

Step 1 — WhatsApp Bot (3 min)

Open: medos.haztech.cloud/chat

Type: "hi" → show the bot greeting in English

Type a phone: "9876543210" → bot recognizes returning patient

Type: "mujhe bukhar hai" → *bot switches to Hindi, shows doctors*

Pick doctor "1" → confirm "haan" → *Appointment booked with token!*

Say: "This entire flow happens on WhatsApp. No app download. No phone call. 24/7."

Step 2 — Kiosk (2 min)

Open: medos.haztech.cloud/kiosk

Click "New Patient" → enter phone → select "Fever" icon → pick doctor → get token

Say: "This is a tablet at your entrance. Patients check in themselves. No receptionist needed."

Step 3 — Room Display (2 min)

Open: medos.haztech.cloud/kiosk/room/priya

Show the queue, "Now Serving" card

Tap to enable audio → play the voice announcement

Say: "This is a TV outside each doctor's room. It calls patients by name in 5 languages. Hindi, English, Marathi, Konkani, Arabic."

Step 4 — Doctor Dashboard (5 min)

Login as priya@haztech.in

Show the queue (live, auto-refreshes)

Click a patient → show AI briefing (complaint, allergies, medications)

Click "Start Consultation" → show 6 tabs:

- Vitals (quick entry)
- Diagnosis (one-tap select)
- Tests (74 tests, one-tap order)
- Prescription (search from 120+ medicines, auto-fills dosage)
- Refer (see other doctor's calendar, pick slot)
- Notes (templates for quick assessment)

Say: "Doctor doesn't fill forms. They tap buttons. Consultation time cut in half."

Step 5 — Admin Dashboard (3 min)

Login as admin@haztech.in

Show: patients today, revenue, queue status, AI automation rate

Show: staff management, slot management, test/medicine management

Show: Settings → India/UAE switching

Say: "Hospital owner sees everything in real-time. Full control."

4. Answers to Common Questions

"How is this different from Practo/DocPulse/other HMS?"

"Those are appointment booking apps or basic HMS software. MedOS is an operating system — it replaces your reception with AI, manages the queue in real-time with voice announcements, and gives doctors one-tap prescription from a database of 120+ medicines. No other system does WhatsApp booking → kiosk check-in → live queue → AI-assisted consultation → auto-billing in one integrated flow."

"Why WhatsApp? Why not an app?"

"500 million Indians use WhatsApp daily. Less than 5% of patients download hospital apps. With MedOS, patients don't download anything. They just message your hospital number. The AI bot handles everything."

"We already have a billing system. Do we need to replace it?"

"No. MedOS can work alongside your existing billing system. We focus on the patient experience — booking, queue, consultation workflow. We integrate with your existing systems, not replace them."

"Is it secure? What about patient data?"

"All data is encrypted. We're ABHA/ABDM compliant. Every access is logged. Consent-based record sharing. We follow DPDP Act (India) and PDPL (UAE) guidelines. The system is designed for government audit."

"How long to set up?"

"Starter plan: 3–5 days. Professional: 1–2 weeks. Enterprise: 2–4 weeks. We handle everything — setup, doctor onboarding, kiosk installation, WhatsApp bot connection."

"What if doctors don't want to use it?"

"Doctors love MedOS because it saves them time. They don't fill forms — they tap buttons. Patient history is pre-loaded. Prescriptions auto-fill with dosage. In our pilot, doctors said consultation time dropped by 40%. We also provide on-site training."

"What about internet issues?"

"The kiosk and queue display work offline for basic check-in and queue management. WhatsApp messages are queued and processed when connectivity returns. The system is designed for Indian infrastructure."

"What's the ROI?"

Quick ROI calculation for a 10-doctor clinic:

- Save 2 receptionists × ₹20,000/month = **₹40,000/month saved**
- 20% more patients due to WhatsApp booking + shorter waits = **₹60,000+ additional revenue**
- Fewer no-shows (automated reminders) = **₹20,000+ saved**
- **Total benefit: ~₹1,20,000/month**
- **MedOS cost: ₹45,000/month**
- **Net gain: ₹75,000/month = ₹9 lakhs/year**

System pays for itself in the first month.

5. Key Selling Points (Memorize These)

For Hospital Owners

- Reduce staff costs by 50%
- See more patients per day
- Real-time dashboard with revenue tracking
- Look modern and tech-forward
- Government compliant (ABHA ready)

For Doctors

- Patient history pre-loaded — no re-asking
- One-tap prescriptions from 120+ medicines
- One-tap test ordering (74 tests)
- Referral with calendar — see slots instantly
- Personal stats: daily/weekly/monthly

For Patients

- Book on WhatsApp in 2 minutes
- No waiting in reception line
- Know exact wait time on phone
- Name called in their language
- Auto reminders for follow-ups

For Investors/Partners

- SaaS model — recurring revenue
- ₹70,000 crore Indian hospital market
- India + UAE dual market
- Government push for digital health
- First-mover in AI hospital OS

6. What Pages to Show for Each Audience

Audience	Show These Pages	Key Message
Hospital Owner / CEO	Admin Dashboard, Settings, Pricing	"Full control, real-time revenue, reduce staff costs"
Doctors	Doctor Dashboard, Consultation tabs, My Stats	"Saves 40% of your consultation time"
Operations Manager	Queue Display, Room Display, Kiosk, Slot Management	"Automates patient flow, zero manual queuing"
IT Team	Settings, API endpoints, ABHA integration	"Modern tech, easy integration, ABDM compliant"
Patients (for marketing material)	WhatsApp bot (/chat), Kiosk, Room Display	"Book in 2 min on WhatsApp, no waiting"

7. Pricing Quick Reference

Plan	Best For	Monthly	Setup (one-time)
Starter	1–3 doctors, small clinic	₹15,000	₹25,000
Professional	4–15 doctors, mid hospital	₹45,000	₹75,000
Enterprise	15+ doctors, chains	₹1,20,000+	₹2,00,000+
Custom	Special requirements	On consultation	On consultation

Important: Always say "pricing is flexible and based on consultation." Never commit to a price without checking with the team first. Every hospital is different — we customise the package.

8. Competitive Advantages (Why We Win)

We Have	Nobody Else Has
WhatsApp AI booking bot	Others need app downloads or phone calls
Voice announcements in 5 languages	Others have silent digital displays at best
One-tap prescription from 120+ medicine DB	Others make doctors type everything
Smart referral with calendar view	Others need phone calls between doctors
India + UAE dual mode	Others are single-country only
ABHA + Emirates ID integration	Most HMS don't have ABHA yet
Self-service kiosk	Others still need reception desk
Live queue (5-second refresh)	Others show static lists
Setup in 1 week	Others take 3–6 months

9. Elevator Pitches (Copy-Paste Ready)

10-second pitch:

"MedOS is an AI system that lets patients book hospital appointments on WhatsApp and manages the entire visit — queue, consultation, billing — automatically. Hospitals save 50% on staff costs."

30-second pitch:

"MedOS is an AI-powered hospital operating system. Patients message on WhatsApp, our AI bot books their appointment in 2 minutes in any language — Hindi, English, Arabic. When they arrive, they check in at a kiosk. A TV screen calls their name. The doctor sees their full history pre-loaded and prescribes with one tap. Bill is auto-generated, insurance auto-verified, follow-up auto-scheduled. Hospitals that use MedOS see 80% less reception work and 40% more patients per day."

WhatsApp message to a hospital contact:

"Hi [Name], I'm from Haztech. We've built an AI system called MedOS that automates hospital reception via WhatsApp — patients book appointments by just messaging your number. It also has a smart queue with voice announcements, one-tap prescriptions for doctors, and auto-billing. Would love to show you a 15-min demo. We have hospitals already saving 50% on reception costs. When works for you?"

Email to hospital CEO:

"Subject: Reduce reception staff by 50% with AI — free demo

Dear Dr. [Name],

I'm reaching out from Haztech. We've built MedOS — an AI-powered hospital operating system that automates patient booking, queue management, and consultation workflow.

Key results: 80% reception automation, 60% shorter wait times, 40% more patients/day.

How it works: Patients book via WhatsApp. Check in at a kiosk. Queue displays with voice announcements in 5 languages. Doctors get AI-generated patient briefings and one-tap prescriptions.

Live demo: <https://medos.haztech.cloud>

Would you have 15 minutes this week for a quick demo? I'd love to show you how it works with your hospital's data.

Best regards,
[Your name] | Haztech"

10. Important Notes

DO NOT:

- Share login credentials publicly (demo only for qualified leads)
- Promise features that don't exist yet (check with dev team)
- Commit to pricing without team approval
- Say "we replace your entire HMS" — we complement existing systems
- Share technical architecture details with competitors

ALWAYS:

- Start with the WhatsApp bot demo — it's the wow factor
- Show the voice announcement — everyone remembers it
- Ask about their current pain points before showing features
- Offer a free 2-week pilot to serious leads
- Follow up within 24 hours of a demo
- Collect: hospital name, doctor count, city, current system, decision maker name
