MedOS — AI-First Hospital Operating System

Product Document

Built by Haztech Digital Innovation Agency Version 1.0 I 2026

What is MedOS?

MedOS is a next-generation Hospital Operating System that **automates 80% of hospital reception and patient management** using AI — from the moment a patient sends a WhatsApp message to their follow-up after treatment.

It's not a typical Hospital Management System. It's an **intelligent operating system** that runs the hospital's patient-facing operations with minimal human intervention.

The Problem We Solve

Current Hospital Reality	With MedOS
3-5 receptionists handling 100+ patients/day	AI handles 80% of interactions automatically
Patients wait 30-60 min with no updates	Real-time queue with wait time predictions
Phone calls go unanswered during rush hours	WhatsApp bot handles unlimited conversations 24/7

Current Hospital Reality	With MedOS
Paper tokens, manual queue	Digital tokens, smart queue with priority scoring
Doctor spends 30% time on paperwork	AI pre-fills patient briefing, one-tap prescriptions
No follow-up after visit	Automated reminders, feedback, re-engagement
Insurance verified after consultation	Insurance pre-verified before booking

How It Works (Patient Journey)

1. Patient Sends WhatsApp Message

"Hi, mujhe bukhar hai 2 din se"

- Bot detects language (Hindi) and responds in Hindi
- Asks for phone number → recognizes returning patients
- Asks about symptoms conversationally
- Finds the right doctor based on complaint
- Shows available doctors with wait times
- Patient picks doctor and confirms
- **Appointment booked with token number — all via WhatsApp**

2. Patient Arrives at Hospital (Kiosk)

- Walks to self-service kiosk (tablet at entrance)
- Enters phone number or ABHA number
- System recognizes them → shows token
- Directed to waiting area
- **No receptionist needed**

3. Waiting Room (TV Display)

- Large screen outside each doctor's room
- Shows: NOW SERVING → Token XYZ, Patient Name
- Queue list below with position numbers
- **Voice announcement in 5 languages** when next patient is called:
- English, Hindi, Marathi, Konkani, Arabic
- Three beeps → "Token number PED-003. Vikram Sharma. Please come in."

4. Doctor Consultation

- Doctor sees patient queue on their screen (auto-refreshes every 5 seconds)
- Clicks patient → sees AI-generated briefing:
- Chief complaint, allergies, current medications
- Previous visit history
- Insurance status
- Referral context (if referred from another doctor)
- **6-tab consultation panel:**
- **Vitals** — BP, temp, pulse, SpO2, weight (quick entry)
- **Diagnosis** — 18 common diagnoses as one-tap buttons + custom

- **Tests** — 74 lab/imaging tests from database, one-tap to order
- **Prescription** — Search from 120+ medicines database, auto-fills dosage/frequency/timing
- **Refer** — Select doctor, see their calendar, pick available slot, set urgency
- **Notes** — SOAP notes with quick templates + patient advice toggles
- Clicks "Complete" → **everything saves to database automatically**

5. After Consultation

- Bill auto-generated (consultation + tests + medicines)
- Insurance claim auto-submitted (if insured)
- Patient gets WhatsApp confirmation
- Follow-up reminder scheduled automatically
- Feedback request sent after 2 hours

6. Referral Flow

- Doctor A refers patient to Doctor B
- Doctor B sees referral in their dashboard with:
 - Patient details, complaint, previous diagnosis
 - Urgency level (Emergency / Priority / Normal)
 - Preferred slot from Doctor A
- Doctor B clicks "Accept" → patient appears in their queue with all data pre-filled
- **Zero re-entry of information**

Key Features

For Patients

- 📱 **Book via WhatsApp** — no app download needed
- 📍 **Digital token** — know your position in real-time
- 🗣️ **Multilingual** — English, Hindi, Marathi, Konkani, Arabic
- ⌚ **Wait time updates** — "You're #3, estimated 12 minutes"
- 🏠 **ABHA integration** — national health ID linked

For Doctors

- 📄 **AI briefing** — patient history pre-loaded before consultation
- 💊 **One-tap prescriptions** — 120+ medicines with auto-fill
- 🏃 **One-tap tests** — 74 tests, just tap to order
- 📅 **Smart referrals** — see other doctor's calendar, book slot directly
- 📊 **My Stats** — daily/weekly/monthly performance dashboard
- 🔴 **Live queue** — auto-refreshes every 5 seconds, no page reload

For Hospital Admin

- 📈 **Dashboard** — patients today, revenue, AI automation rate, queue depths
- 👥 **Staff management** — add/edit doctors, nurses, receptionists
- ⌚ **Slot management** — set doctor schedules with calendar preview
- 🏃 **Test management** — add/remove available lab tests and imaging
- 💊 **Medicine database** — manage 120+ medicines
- ⚙️ **Settings** — hospital name, region (India/UAE), configuration

For Hospital Owner (Super Admin)

-  **Multi-hospital** — manage multiple hospitals from one panel
-  **Region switching** — India mode vs UAE mode (different currencies, languages, health IDs, insurance systems)
-  **Cross-hospital analytics**

India vs UAE — One System, Two Modes

Feature	 India Mode	 UAE Mode
Currency	₹ (INR)	AED
Health ID	ABHA (Ayushman Bharat)	Emirates ID
Insurance	PMJAY + TPA	DHA / DoH (mandatory)
Languages	EN, HI, MR, KOK + 6 more	EN, AR
Voice Announcements	English, Hindi, Marathi, Konkani	English, Arabic
Payment	UPI, Cash, Card	Card, Apple Pay, Insurance
Tax	GST 18%	VAT 5%
Emergency	108	999
Compliance	DPDP Act, ABDM	PDPL, NABIDH

Switch between modes in Settings → entire system adapts instantly.

Technical Highlights

- **Built with:** Laravel 13 (PHP 8.4), Tailwind CSS, Alpine.js
- **Database:** SQLite (dev) / PostgreSQL (production)
- **WhatsApp Bot:** whatsapp-web.js — just scan QR code, bot is live
- **No app download needed** — patients use WhatsApp, staff use web browser
- **AI-powered:** language detection, triage scoring, specialty mapping
- **Real-time:** queue updates every 5 seconds, room display every 10 seconds
- **Secure:** role-based access, audit logs, encrypted health data, ABHA consent management
- **19 database tables**, 130+ PHP files, 25+ blade views

Revenue Model (SaaS)

India Pricing

Plan	Target	Monthly
Starter	1-3 doctors	₹15,000/mo

Plan	Target	Monthly
Professional	4-15 doctors	₹45,000/mo
Enterprise	15+ doctors	₹1,20,000+/mo

UAE Pricing

Plan	Target	Monthly
Professional	1-5 doctors	AED 3,500/mo
Enterprise	5+ doctors	AED 8,000+/mo

Setup Fees

- Starter: ₹25,000 one-time
- Professional: ₹75,000 one-time
- Enterprise: ₹2,00,000+ one-time

What Makes MedOS Different

1. **AI-native** — AI is the system, not a chatbot bolted on top
 2. **WhatsApp-first** — 500M+ Indian users, zero friction
 3. **No app download** — patients use WhatsApp, staff use browser
 4. **Works offline** — kiosk and queue display work without internet
 5. **5-language voice** — announcements in English, Hindi, Marathi, Konkani, Arabic
 6. **India + UAE ready** — one system, two regulatory frameworks
 7. **ABHA integrated** — national health ID with consent management
 8. **Doctor-friendly** — one-tap prescriptions, not forms to fill
-

Target Market

Primary: India

- 70,000+ hospitals with 5-50 doctors
- Rising insurance penetration (PMJAY covering 500M people)
- WhatsApp penetration: 500M+ users
- Government push for digital health (ABDM)

Secondary: UAE

- Mandatory health insurance for all residents
 - High smartphone penetration
 - DHA pushing for digital-first healthcare
 - Expat population needs multilingual support
-
